Art Unit: 2852

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

On line 6 of claim 5, change "front" to --- font ---.

The following is an examiner's statement of reasons for allowance.

Claims 1-5

The reason for allowance is an image forming apparatus comprising: light-emitting means for emitting a light beam in accordance with image data representing pixels arranged in a main scanning direction and a sub-scanning direction; an image carrier for forming an electrostatic latent image when scanned with the light beam emitted from the light-emitting means; scanning means for scanning the image carrier with the light beam emitted from the light-emitting means, the scanning means including a polygon mirror for reflecting the light beam; first drive means for rotating the polygon mirror; second drive means for rotating the image carrier, thereby to move a surface of the image carrier in the sub-scanning direction; developing means for applying developer onto the image carrier, thereby to develop the electrostatic latent image into a visible image; transfer means for transferring the visible image from the image carrier onto an image-forming medium; first speed-changing means for changing a rotational speed of the first drive means in accordance with an error in magnification in the main scanning direction, the error being

Art Unit: 2852

determined from a size ratio of the visible image transferred onto the image-forming medium to an original document image; and second speed-changing means for changing a rotational speed of the second drive means in accordance with the change in the rotational speed of the first drive means. The above limitations are contained in claims 1-5, but are not taught or suggested by the prior art.

Claims 6-11

The reasons for allowance is a method of forming an image, comprising the steps of :  
emitting a light beam in accordance with image data representing pixels arranged in a main scanning direction and a sub-scanning direction; scanning an image carrier with the light beam in the main scanning direction by reflecting the light beam by means of a rotating polygon mirror; rotating the image carrier, thereby moving a surface of the image carrier in the sub-scanning direction and forming an electrostatic latent image on the surface of the image carrier; applying developer onto the image carrier, thereby to develop the electrostatic latent image into a visible image; transferring the visible image from the image carrier onto an image-forming medium; changing a rotational speed of the polygon mirror in accordance with an error in magnification in the main scanning direction, the magnification being determined from a size ratio of the visible image transferred onto the image-forming medium to an original document image and changing a rotational speed of the image carrier in accordance with the change in the rotational speed of the polygon mirror. The above limitations are contained in claims 6-11, but are not taught or suggested by the prior art.

Art Unit: 2852

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
